

## GENERAL SPECS

### USED PRICES

Airplane and some helicopter selling prices are based on the latest edition of the *Aircraft Bluebook Price Digest*. Additional helicopter pricing data is from helicopter appraisers HeliValues.

### PASSENGER/PILOT SEATING

The typical passenger seating on the aircraft is not the maximum certified seats. These numbers may vary for different operations (corporate, commercial, EMS, etc.). Maximum number of passengers is as certified. Pilot seating is typical (i.e., two pilots may be indicated even if aircraft is single-pilot certified).

### CABIN DIMENSIONS

Cabin volume is the interior volume, with headliner in place, without seats or other furnishings. Cabin width, height and length are based on a completed interior. Width and height are the maximum within that cabin space. In "cabin-class" aircraft, the length is measured from the cockpit divider to the aft pressure bulkhead (or aft cabin bulkhead, if unpressurized). For small-cabin aircraft, the distance is from the cockpit firewall to the aft bulkhead.

### WEIGHTS

Max takeoff weight (mtow) is specified during aircraft certification. Fuel capacity is in gallons based on 6.7 pounds per gallon (jet fuel). Max payload with full fuel is the useful load minus the usable fuel. The useful load is based on the maximum ramp weight minus the basic operating weight.

### PRODUCTION STARTED/ENDED

Year of the first delivery to the year of the last serial-number delivery.

### NUMBER BUILT

Total number produced, which may include converted aircraft.

## JETS
